Cell Salvage – a safe cost-effective option to reduce donor blood transfusion

“Donor blood has become expensive and in short supply over the last few years. Although it is extensively tested and monitored, it is not without risk from viruses, reactions or incorrect blood being transfused.”

Serious Hazards of Transfusion (SHOT) Report 2004.

Our Service

Blood Savers Ltd is dedicated to supplying a reliable and professional mobile ICS service on an as needed basis that is cost efficient and provides a high level of safety and improved outcome for patients.

Our technicians provide the equipment necessary for intraoperative and postoperative cell salvage.

The benefits of Blood Savers' service:

- ∞ Patient benefits from reduced risk of blood transmitted viruses, immune complications and incorrect blood transfused.
- ∞ Budget benefits from reduced cost compared to total cost of supplying donor blood.
- ∞ Valuable safety net in the event of unexpected heavy blood loss.
- ∞ "On Demand" service means you pay for it only when you need it.
- ∞ Qualified technicians, Haemonetics state-of-the-art equipment and expertise all supplied by **Blood Savers**.

Better Blood Transfusion

Health Service Circular – HSC 2002/009

A report from the Chief Medical Officer, Sir Liam Donaldson, July 2005 states:

Objective:

Secure appropriate and cost-effective provision of blood transfusion and alternatives in surgical care.

Action:

Review and explore the use of effective alternatives to donor blood and the appropriate use of autologous blood transfusion: pre-donation, peri-operative and post-operative cell salvage.

Blood Savers can contribute towards achieving your blood conservation objectives.

Cell salvage is the solution for those whose religious tenets, such as Jehovah's Witnesses, prohibit them from accepting donor blood or for those in the community who, due to medical concerns, refuse blood transfusions.
